RUN THE COUNTER

Bill, scan and return.

MANAGE THE STOCK

Track batches and expiry.

SEE THE SIGNALS

Review your next move.

14-DAY FREE TRIAL

1 BRANCH

NO CARD

ONE CONNECTED WORKSPACE

Made for the full workday.

From the first bill to the next stock order, keep the work your team does connected to the decisions an owner makes.

01

Sell with context

Create walk-in bills, apply configured tax and discount rules, handle returns and keep stock records connected to each sale.

02

Know every batch

Review products, inventory locations, racks, batches and expiry dates. See what is available and what needs attention.

03

Buy with confidence

Keep suppliers, purchases and purchase returns together. Use recent demand and reorder estimates to prepare your next order.

04

Give the owner clarity

Review margins, expiry exposure and branch performance. Configure staff permissions and keep an audit trail of recorded activity.

YOUR PHARMACY'S OWN WORKSPACE

Your own pharmacy link and logo, with enabled features and branch access configured for your shop.

BILLING + PACKAGED-PRODUCT BARCODES

Faster at the counter.

Search by name, or scan a configured retail pack. Keep the product, selected batch, quantity and bill together.

SCAN PACKAGED PRODUCT

One scan adds one whole retail pack. Name search below is always available.

Added 1 retail pack: Daily Care Cream 30g · Batch DC-CENTRAL-01.

MEDICINE	BATCH / EXPIRY	QTY	DURATION	MRP	GST %	DISC	TAXABLE	TOTAL	
Daily Care Cream 30g <small>Ointment</small>	DC-CENTRAL-01 <small>2027-12-19</small>	1 <small>Tube</small>	Days <small>1 day before finish</small>	₹180.000 <small>/Tube</small>	0	0.00% <small>Max 5.00%</small>	₹180.000	₹180.000	<input type="button" value="Remove"/>

Actual billing screen with illustrative demo data.

For whole-pack creams, soaps, condoms and configured FMCG or surgical products. Tablet and medicine billing continues through the existing search flow.

01

Link the code

Add the manufacturer's pack barcode to the product, or prepare a label for a stock batch.

02

Scan and select

Choose the branch inventory. If several batches match, select the batch printed on the pack.

03

Check and bill

One scan adds one whole retail pack. Review the bill and quantity before completing the sale.

Name search stays

Barcodes are optional. Your team can always find a product by name and continue the usual billing flow.

Print your own labels

Choose label copies for a batch. Use A4 sticker sheets or a 60 x 35 mm label printer. Printing leaves stock unchanged.

STOCK + PURCHASING

Know what is on the shelf.

Follow inventory from receipt to sale, then use batch, expiry and demand signals to decide what needs attention next.

01

Batch & location

Keep stock organised by inventory, rack, batch and expiry. Review available quantities where the product is stored.

02

Expiry visibility

See near-expiry batches and their remaining purchase-cost exposure. Review stock condition and supplier return terms.

03

Supplier purchases

Record stock purchases and supplier details. Keep purchase returns within the same operating workflow.

04

Stock transfers

Move stock between enabled branches and follow batch details across locations. Review where available stock is needed.

TURN A STOCK CHECK INTO AN ACTION

RECEIVE

Record the batch and its location.

REVIEW

Check demand, cover and expiry.

RESPOND

Consider reorder, transfer or return.

THE OWNER'S VIEW

See what needs attention.

Go from a list of transactions to a useful daily view of gross profit, stock exposure, demand and branch performance.

Branch scorecard

Sales and profit: last 7 days · walk-in bills

BRANCH	NET SALES	GROSS PROFIT	MARGIN	LOW-STOCK PRODUCTS	EXPIRY RISK
Central Pharmacy	₹32677.45	₹13219.05	40.45%	4	₹4040.00
Lakeview Branch	₹15143.10	₹6106.30	40.32%	0	₹0.00
North Branch	₹15899.10	₹6393.10	40.21%	0	₹0.00

Actual branch scorecard with illustrative demo data.

Protect availability

Use recent sales to review reorder estimates and stock cover.

Review profitability

Watch gross profit, margins and negative-margin lines.

Act on expiry risk

Review batches at risk and compare branch requirements.

AI, WITH A PURPOSE

Business signals.

Practical next steps.

Your dashboard calculates the signals. An optional AI daily brief turns aggregate sales and stock totals into actions to review: purchasing, expiry exposure and performance.

25 OCT 2026

Your daily action brief

Illustrative example - demo data

1. Protect availability. Review 6 reorder suggestions before your next supplier order. Check recent demand and supplier lead times.
2. Reduce expiry exposure. Rs 4040.00 of stock at purchase cost is nearing expiry. Review transfers and supplier return terms.
3. Review performance. Last 7 days: Rs 32677.45 across 52 bills. Compare branch margins and investigate negative-margin lines.

Generated 25 Oct 2026, 4:55 PM. A new brief can be generated tomorrow.

Only aggregate figures are sent to the AI service. Customer identities, prescriptions, invoices, and medicine names are excluded. This is business guidance, not clinical advice.

ADMIN ONLY / ONE BRIEF PER DAY / AVAILABLE WHEN ENABLED

Customer identities, prescriptions, invoices and medicine names are excluded from AI requests. Business guidance for the owner to review before acting.

WHY PARAMETER LABS

Go beyond billing alone.

Compare the everyday workflow: what is recorded, what stays connected, and what helps an owner decide the next step.

WHAT MATTERS	PARAMETER LABS	BILLING-ONLY WORKFLOW
Sale to stock	Billing and returns update the same stock records.	The bill is the main record; stock follow-up can be separate.
Batch and expiry	Batch-wise stock, location views and expiry exposure.	Often tracked outside the invoice flow.
Packaged-product barcodes	Scan pack codes or print batch labels; name search stays available.	A barcode may identify a product without batch-level selection.
Owner decisions	Gross profit, reorder estimates, expiry value and branch scorecard.	Usually needs exports or manual analysis.
Multi-branch control	Private link, configured branch allowance and stock transfers.	Often needs separate files or extra setup.
AI daily brief	When enabled, admin-only actions from aggregate sales and stock.	Interpretation stays with the owner unless analytics are added.
Moving existing data	Assisted CSV/XLSX mapping, validation and preview.	Often manual re-entry or vendor-specific imports.

This comparison describes a basic billing-only workflow, not every pharmacy software product or plan. Advanced ERPs may offer overlapping features; check each vendor's configuration.

Explore these workflows in a guided demo for your pharmacy.

ParameterLabs
PHARMACY SOFTWARE

A CLEAR PATH FROM YOUR CURRENT SYSTEM

Move forward.

Bring your records.

Start with your pharmacy's workflow. We help set up the workspace and review supported exports from your existing software.

01

Set up your pharmacy

Share the shop name, address, logo and owner email. We configure the pharmacy link, enabled features and branch access.

02

Map and preview your data

Bring supported CSV/XLSX exports for products, stock and historical records. Review field mapping, validation and the import preview.

03

Review, then start

Compare imported records and totals before switching. Historical transactions stay searchable. The trial starts when the owner activates the invitation.

Migration depends on the records your current system can export. Imports are assisted; there is no direct vendor sync.
